Philips Eco Monitors

Developing high-performance products that adhere to strict environmental standards.

In a significant step toward environmental responsibility and innovation in the electronics industry, Philips Monitors, one of the leading display manufacturers, is delighted to announce their recent achievement of the EPEAT Climate+ certification. The logo is now prominently displayed on the EPEAT website, signifying their important role and recognition in the realm of eco-conscious technology. This certification underscores their commitment to developing high-performance products that adhere to strict environmental standards.

In the face of the rapidly escalating climate crisis, there is an urgent need for innovative solutions across all sectors, particularly in the Information and Communication Technology (ICT) sector. This pressing environmental challenge calls for immediate action from both manufacturers and consumers within the industry.

EPEAT Climate+ Certification: a new benchmark

The EPEAT Climate+ certification distinguishes Philips Monitors as a leader in the drive towards more sustainable electronic products.

The certification process, overseen by the Global Electronics Council (GEC), requires adherence to stringent criteria that ensure products are designed and

manufactured with a focus on reducing their carbon footprint and mitigating climate change.

EPEAT Climate+ Champions are manufacturers who have EPEAT registered products that have attained the EPEAT Climate+ designation.

What are the criteria for the EPEAT Climate+ designation?

To achieve the EPEAT Climate+ designation, products must meet several key criteria, reflecting a comprehensive approach to sustainability:

- **Public and Third-Party Verified Product GHG Disclosures:** transparent and verified disclosures of product greenhouse gas emissions.
- **Energy Efficient Upstream Manufacturing Processes:** manufacturing processes that prioritise energy efficiency.
- **Science-Based GHG Reduction Targets:** commitment to scientifically grounded targets for reducing greenhouse gas emissions.
- **Renewable Energy Sourcing:** utilisation of renewable energy sources in product manufacturing.
- **Product Energy Efficiency Standards:** compliance with high standards of product energy efficiency.

These criteria, developed in collaboration with a broad spectrum of stakeholders including manufacturers, scientists, policymakers, and sustainability advocates, are designed to ensure that products meet the highest industry standards for decarbonisation.

A commitment to comprehensive sustainability.

The certification not only recognises the eco-friendly design of the products but also the responsible practices of the companies behind them. Third-party verification experts approved by the GEC ensure that all required climate criteria have been met, adding a significant level of credibility to the EPEAT Climate+ designation.

The impact on consumers and the environment.

This certification is particularly meaningful in an era where consumers are increasingly conscious of the environmental impact of their choices.

It helps purchasers to quickly identify technology products that are designed and manufactured with climate change mitigation in mind, thus contributing to the collective effort to alleviate the climate crisis.

Philips Monitors' achievement empowers consumers to make informed decisions, selecting products that align with their values of environmental responsibility.

A message from Kevin Yang:

Philips Monitors' ongoing efforts to reduce their carbon footprint and foster sustainable practices within the electronics industry are at the core of their corporate ethos. "We would like to thank the Global Electronics Council for launching the new EPEAT Climate+ designated products certification, which will further empower manufacturers like us to introduce more sustainable products to the market," says Kevin Yang, Technical Product Lead EU | Global Product Manager at Philips. At Philips Monitors, we believe that sustainability is the key to our success and offers us the opportunity to use our skills, expertise and relationships to create a better future for individuals, society at large and the environment we all live in.

Advancing towards a greener future

Philips Monitors' achievement of the EPEAT Climate+ certification marks a significant step in their journey toward environmental sustainability. It demonstrates a proactive approach to integrating sustainability into their products and reflects their commitment to the well-being of both the environment and their consumers.
